## ***DETAILED ACTION***

### ***Allowable Subject Matter***

1. Claims 36-43 are allowed.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reason for allowance:

None of the prior art of the record either singularly or in combination teaches or fairly suggests a method of controlling transmission power of a data transmitter in a wireless network receiving a response message comprising a transmission power adjustment that "the transmission power adjustment requesting message comprises link information that is based on a link quality of the data transmitting device and a reference link quality of the receiving device and the link quality of the data transmitting device includes reception power of the packet" as disclosed in claim 36, and "the transmission power adjustment requesting message comprises link information that is based on reception power of the packet and desired reference power of the receiving device" as disclosed in claim 43.

Newly cited reference Jolma (US Patent No. 5806003) teaches a method for controlling a transmission power in a wireless communication system (Abstract, lines 1-4, column 1, lines 9-21), and a transmission power measurement (column

2, lines 48-50) and channel request adjustment (column 2, lines 50-54).

However, the reference does not teach having the transmission power adjustment message link information that is based on a link quality of the data transmitting device and reference link quality of the receiving device and based on reception power of the packet and desired reference power of the receiving device.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
